

Welcome to JITJea: Your Premier Source for Just In Time Privileged Access Management

What is Just In Time (JIT) Privileged Access Management?

In today's complex cybersecurity landscape, the risk posed by standing privileged accounts—those with continuous, unchecked access to critical systems—has become a top concern. Just In Time (JIT) Privileged Access Management (PAM) is a security paradigm designed to **minimize attack surfaces by granting privileged access only for the time needed to perform a specific task**.

Unlike traditional PAM, which often provides persistent access, JIT PAM **proactively reduces exposure** by enforcing time-bound, just-in-time credentials. This limits the window in which privileged accounts can be exploited, mitigating the risk of insider threats, credential theft, and ransomware attacks.

Why JIT PAM is Essential for Modern Cybersecurity

- **Reduce Attack Surface:** Remove standing privileged credentials that attackers commonly target.
 - **Improve Compliance:** Meet stringent regulatory standards such as GDPR, HIPAA, PCI-DSS, and NIST by enforcing least privilege and session monitoring.
 - **Enhance Operational Efficiency:** Streamline privileged access workflows without compromising security, enabling faster incident response and audits.
 - **Mitigate Risk of Credential Theft:** Dynamic credential generation and ephemeral access reduce the chance of credential reuse or compromise.
-

How Delinea Powers Just In Time PAM

Delinea, a leader in PAM solutions, delivers a comprehensive platform that seamlessly integrates Just In Time access controls into your existing IT infrastructure:

Key Features of Delinea's JIT PAM Solution

- **Dynamic Access Provisioning:** Automatically generate temporary privileged credentials only when requested and authorized.
- **Granular Access Controls:** Enforce precise permissions tailored to specific tasks or systems.
- **Session Recording and Monitoring:** Capture and audit all privileged sessions to ensure accountability and detect suspicious behavior.
- **Risk-Based Access Policies:** Leverage contextual factors like user location, device posture, and behavior analytics to grant or deny access dynamically.
- **Integration with Identity Providers:** Works with existing SSO, MFA, and Identity Governance to enhance security without disrupting user experience.
- **Automated Credential Rotation:** Automatically rotate passwords and keys after each session, eliminating stale credentials.

JITJea's Expertise in Implementing JIT PAM with Delinea

At JITJea, we specialize in helping organizations design, deploy, and manage Delinea's JIT PAM solutions tailored to your environment and security requirements.

- **Assessment and Strategy:** We assess your privileged access risks and develop a phased JIT PAM implementation plan.
- **Seamless Deployment:** Minimize downtime and operational impact with expert integration across cloud, on-premises, and hybrid systems.
- **Custom Policy Design:** Define access workflows, approval processes, and compliance controls that align with your business.

- **Training and Support:** Empower your teams with hands-on training and ongoing support for smooth adoption and sustained security.
-

Real-World Benefits of JIT PAM with Delinea

Organizations that implement JIT PAM through Delinea and JITJea's guidance achieve:

- **Up to 90% reduction in attack surface related to privileged accounts**
 - **Improved compliance audit readiness and reporting**
 - **Faster detection and response to security incidents involving privileged access**
 - **Enhanced operational agility and reduced manual overhead**
-

Explore Our Resources

- **Whitepapers:** Deep dive into JIT PAM architecture and best practices.
 - **Case Studies:** Learn how enterprises across industries reduced their privileged access risks.
 - **Webinars:** Join live sessions with PAM experts discussing emerging threats and JIT solutions.
